Lab1 Due Feb 9

The United Nations has a freely available program designed to teach remote sensing. The software is called Bilko. It comes with a complete set of tutorials. This lab will focus the next 2 weeks on going through the Bilko Tutorials. Each tutorial has a set of questions that need to be answered. Please complete the questions and email me at James.Coss@utoledo.edu.

The purpose of this tutorial is to introduce you to a very simple program that will walk you through some of the techniques required to work with digital image data. All of the material necessary to complete this project are on the server [//gisag98.uhw.utoledo.edu/gepl5500](http://gisag98.uhw.utoledo.edu/gepl5500)

Look in the Bilko directory for the material needed you must download the files you need to your local computer. Don't use the files on the server.
